Anti-Philosophy – Will and Representation – Description of A Daily Life

---

A day and its line, just to produce a line of inquiry – any inquiry will be pure – think of infinity, surrealism and numbers for a day – call it a topic.

By Shomit Sirohi

Introduction

Any kind of jotting or comment per day – just join it to a scientific philosophy.

I. My point is resounding with a Will to Represent

I am resounding happiness – I begin the day that way. I get to the central square or plaza wherever I am, and spend time drinking tea or coffee, and learning its economics.

II. I go to work and teach

I then go to work, or stay at home working and teach – I decided to be a teacher.

III. I understand then to write, and read – perhaps that difficult word in French Hegel, reflect on life in a logic

I meant then Hegel is full of reflections on life in the simple sense of a third party which mediates a dyad – I made this all through,

and ensemble like – because I see that before me.

Part IV – My Point Again

Just catching the people, imagining strikes = a revolt, but also reading, and writing – just speaking perhaps now in philosophy and mathematics, even musicalism.

I. Hegel
II. Leibniz

Or

I. Spinoza
II. Althusser

Just a jotting, and then to Hegel and then to Marx, and then to Spinoza – a line joining other lines like this –

with I add a thesis and anti-thesis and synthesis – just the pure stuff.

Now the day is well spent – keep being a mechanical dialectician –

Be an anti-philosopher – I mean a will to represent takes you to philosophy or art, even mathematics as an art – this logic is called living

life logic – it guides you to life, a daily life –

Imagine you say I will keep shifting between philosophies – just means you know that it is representation – produce a work of pure representation per day – the appearance not the shadows of the cave. That is what I meant – be interested in appearances – a lover is

graceful, perhaps others again and again.
